C/O Mr. Don Fisher

P O Box 105

Antelope OR 97001

October 16, 2014

Dear Mr. Fisher,

Attached is a copy of your Lead and Copper, and Disinfection By-products, test results, sampled on September 2014. Please do not hesitate to call Box R Water Analysis Laboratory with any questions that you have in regards to your test results.

Thank-you for using Box R Water Analysis Laboratory, we appreciate your business.

Sincerely,

SK Miyazaki-Box R water Analysis Laboratory Director

RE: BRW X016473-City of Antelope

Order No.: 1409B17

Dear Sherri Miyazaki:

Neilson Research Corporation received 5 sample(s) on 09/30/14 for the analyses presented in the following report.

The results relate only to the parameters tested or to the sample as received by the laboratory. This report shall not be reproduced except in full, without the written approval of Neilson Research Corporation. If you have any questions regarding these test results, please feel free to call.

Sincerely,
Neilson Research Corporation

Alec C Smith
Project Manager

CASE NARRATIVE

The analyses were performed according to the guidelines in the Neilson Research Corporation Quality Assurance Program. This report contains analytical results for the sample(s) as received by the laboratory.

Neilson Research Corporation certifies that this report is in compliance with the requirements of NELAP. No unusual difficulties were experienced during analysis of this batch except as noted below or qualified with data flags on the reports.

Lead & Copper
First Draw Sample Collection Procedures

These samples are being collected to determine lead and copper levels in your tap water. This sampling effort is required by the U.S. Environmental Protection Agency and your state, and is being accomplished through the cooperation of homeowners and residents.

Collect all water samples before the facility opens and before any water is used. Ideally, the water should sit in the pipes unused for at least 6 hours but not more than 18 hours before a sample is taken. Make sure that no water is withdrawn from the taps or fountains from which the samples are to be collected prior to their sampling.

Unless specifically directed to do so, do not collect samples in the morning after vacations, weekends, or holidays because the water will have remained stagnant for too long and would not represent the water used for drinking during most of the days of the week.

1. Prior arrangement will be made with customer to coordinate the sample collection event. Dates will be set for a sample kit delivery and pick-up by the water department staff.
2. A kitchen or bathroom cold water faucet is to be used for sampling. Place the open sample bottle below the faucet and gently open the cold water tap. Fill the sample bottle to the neck and turn off the water.
3. Tightly cap the sample bottle. Please carefully complete this form.
4. IF ANY PLUMBING REPAIRS OR REPLACEMENT HAVE BEEN DONE IN THE HOME SINCE THE PREVIOUS SAMPLING EVENT, NOTE THIS INFORMATION ON THIS FORM BELOW.
5. Place the sample with form attached outside of the residence in the location of the delivery for pick up.
6. Results from this monitoring effort will be provided to participating customers when reports are generated for the State unless excessive lead and/or copper levels are found. In those cases, immediate notification will be provided by Water Analysis Laboratory sample collection.

Lead & Copper
First Draw Sample Collection Procedures

These samples are being collected to determine lead and copper levels in your tap water. This sampling effort is required by the U.S. Environmental Protection Agency and your state, and is being accomplished through the cooperation of homeowners and residents.

Collect all water samples before the facility opens and before any water is used. Ideally, the water should sit in the pipes unused for at least 6 hours but not more than 18 hours before a sample is taken. Make sure that no water is withdrawn from the taps or fountains from which the samples are to be collected prior to their sampling.

Unless specifically directed to do so, do not collect samples in the morning after vacations, weekends, or holidays because the water will have remained stagnant for too long and would not represent the water used for drinking during most of the days of the week.

1. Prior arrangement will be made with customer to coordinate the sample collection event. Dates will be set for a sample kit delivery and pick-up by the water department staff.
2. A kitchen or bathroom cold water faucet is to be used for sampling. Place the open sample bottle below the faucet and gently open the cold water tap. Fill the sample bottle to the neck and turn off the water.
3. Tightly cap the sample bottle. Please carefully complete this form.
4. IF ANY PLUMBING REPAIRS OR REPLACEMENT HAVE BEEN DONE IN THE HOME SINCE THE PREVIOUS SAMPLING EVENT, NOTE THIS INFORMATION ON THIS FORM BELOW.
5. Place the sample with form attached outside of the residence in the location of the delivery for pick up.
6. Results from this monitoring effort will be provided to participating customers when reports are generated for the State unless excessive lead and/or copper levels are found. In those cases, immediate notification will be provided, usually 10 working days from the time of sample collection.

If you have any questions please call: _____

TO BE COMPLETED BY RESIDENT

Water was last used: Time 5:30 pm (am/pm) Date 9-28-14

Sample was collected: Time 5:30 am (am/pm) Date 9-29-14
